# ANACONDA 2 – Updating Packages

Launching VS-Code

You can launch VS-Code from the Applications folder or from Anaconda Navigator

- Consider launching from Anaconda if you are experiencing issues running Python.
- Open "Anaconda Navigator." Go to the "Home" tab and launch the VS-Code app.

Updating Packages:

In Anaconda Navigator you can update packages without using the terminal.

1. Open "Anaconda Navigator" and go to the "Environments" tab. You will see all the packages installed in your current environment.

2. **To install new packages, go to the "Not installed" option and search for the package you want to install.**
